MEMORANDUM

To: Brian Hunt
From: Tom Grimshaw
Subject: Geologic Map of the Mountain City Quadrangle: Second Update of Segments for Digitizing for GIS

In my memo of May 19, 2018 I provided revised segments of the Mountain City Quadrangle geologic map. Two of the segments in Tier 4 (see below) – the central and eastern segments of the tier – were indicated “unmapped” or “in progress” in the area between the Blanco River and FM 150 (mostly the former Gregg Ranch). This mapping has now been completed.

The purpose of this memo is to provide another complete set of the geologic map segments with the two in Tier 4 updated and replaced. As in the May 19 memo, all of the segments are provided, but with the replacements for the two segments.

Attachment A contains the nine segments within the Mountain City Quadrangle and some of the segments surrounding the quad. The remaining surrounding segments will be provided in a future memo.

The next step is to provide a “colored-in” version of the taped-together map segments to better illustrate the geologic features. Although more refinements are expected, in particular mapping of alluvium around Onion Creek, I believe we are ready to proceed to digitization for preparing a GIS version.

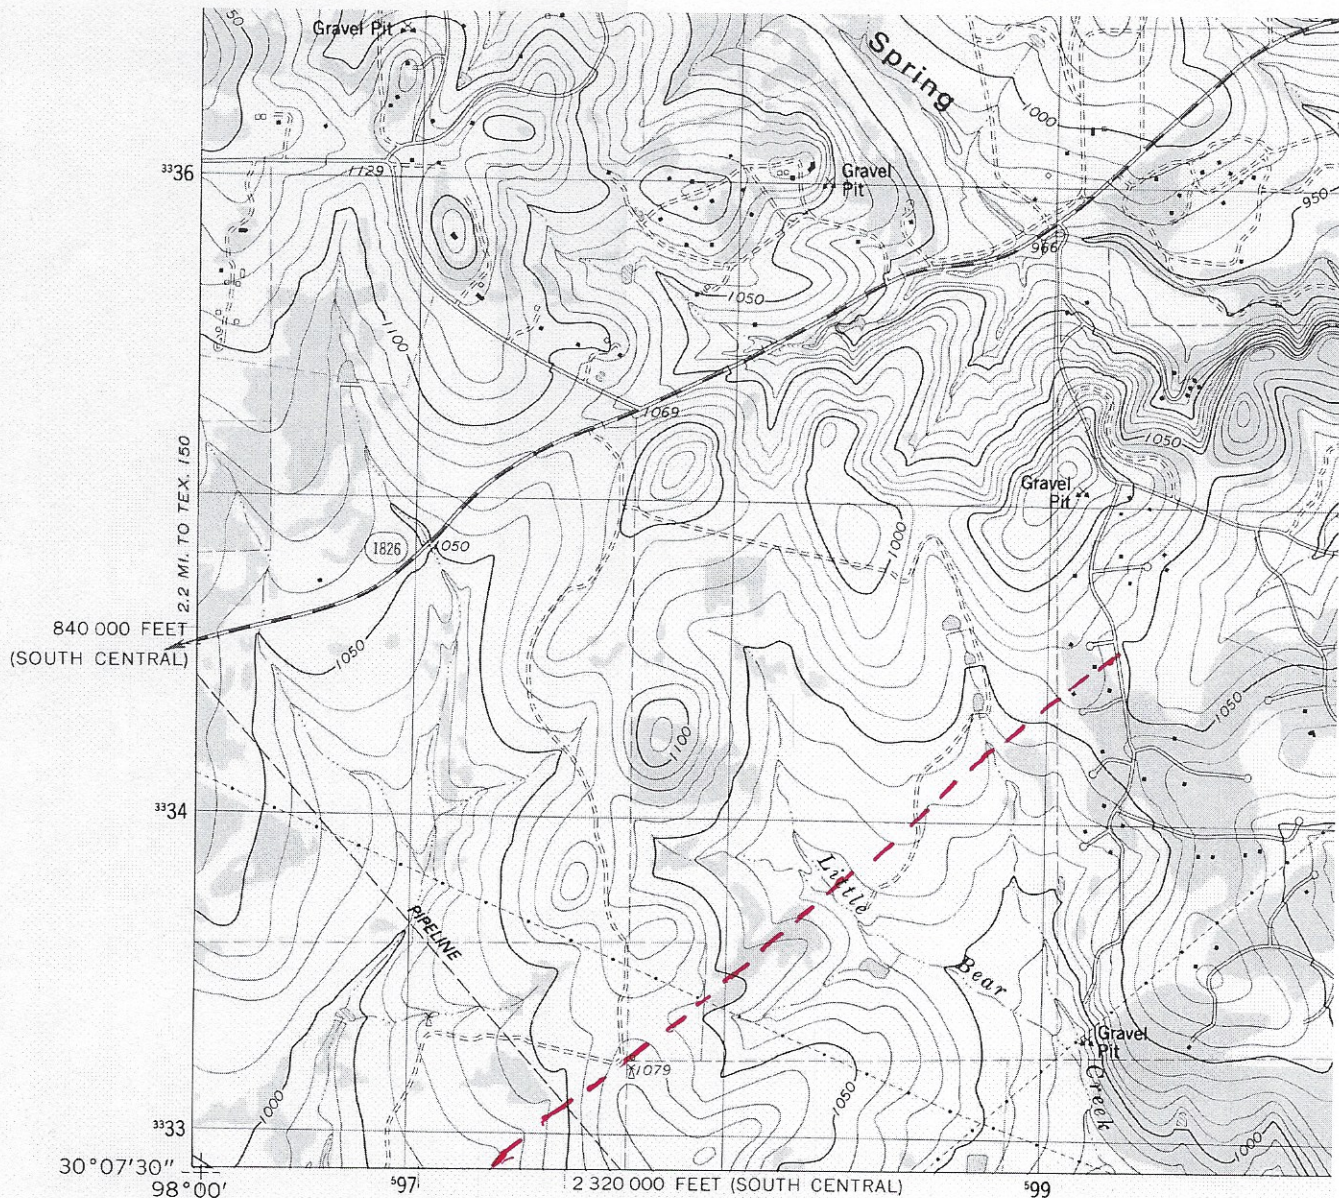

As always, please let me know if you have any questions.

Attachment A.

Updated Segments of Geologic Mapping of the Mountain City Quadrangle

(WIMBERLEY)

Produced by the United States Geological Survey

Control by USGS and NOS/NOAA

Compiled from aerial photographs taken 1967. Revisions shown in purple compiled from aerial photographs taken 1986 and other sources and have been field checked. Map edited 1994. Conflicts may exist between some updated features and previously mapped contours.

North American Datum of 1927 (NAD 27). Projection and 10000-foot ticks: Texas Coordinate System, south central zone (Lambert Conformal Conic)

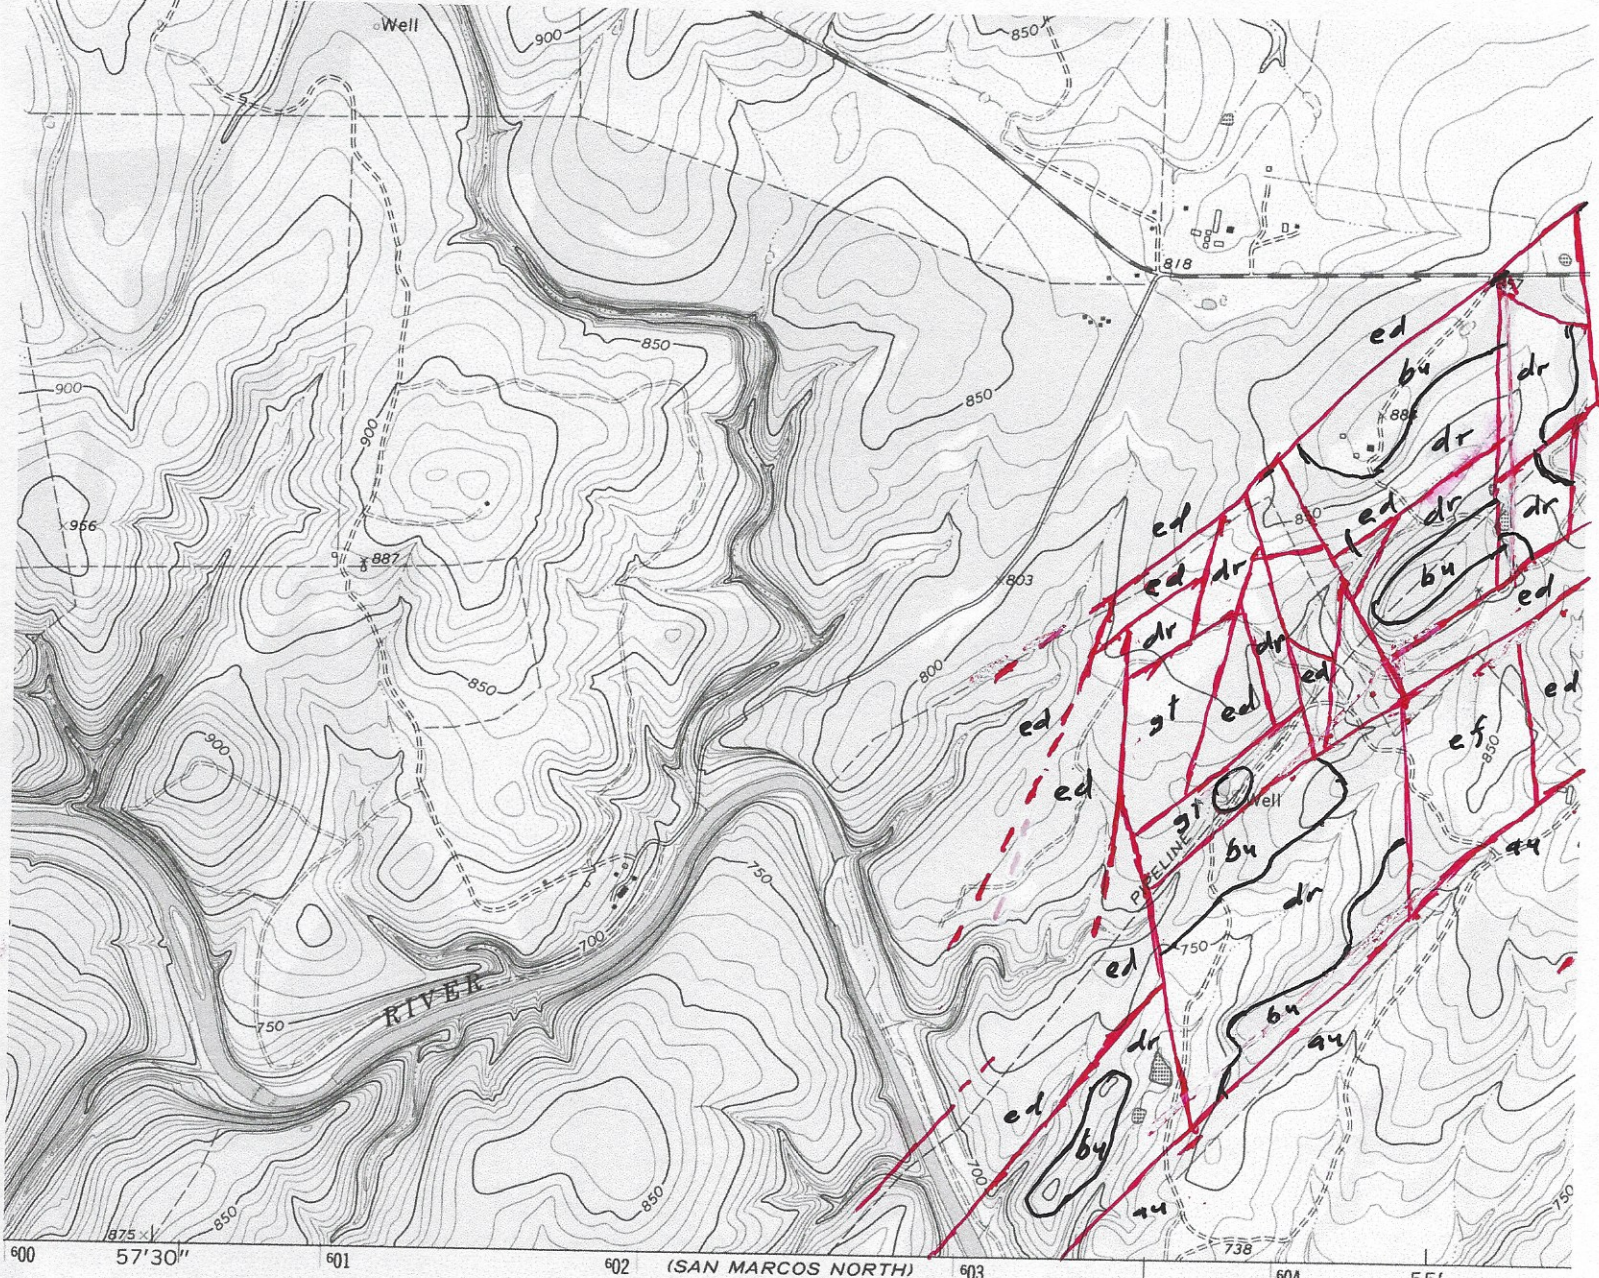

Blue 1000-meter Universal Transverse Mercator ticks, zone 14

North American Datum of 1983 (NAD 83) is shown by dashed corner ticks. The values of the shift between NAD 27 and NAD 83 for 7.5-minute intersections are obtainable from National Geodetic Survey NADCON software

Areas covered by dashed light blue pattern are subject to controlled inundation
