MEMORANDUM

To: Brian Hunt, BSEACD
From: Thomas Grimshaw
Subject: Notes from Meeting on November 3, 2015

Thank you again for giving me permission to work in the “guest room” of BSEACD offices yesterday. During my visit, we covered several topics, which are summarized as follows:

1. BBH will scan measured section for Kuykendahl property and email to TWG for inclusion in trip report – and a future report to accompany the Mountain City geologic quadrangle map.
2. The trip to Halifax and former GLO property will be split into two trips. BBH to contact Halifax Ranch. TWG to contact Hank Smith at the City of Kyle.
3. Detailed plans were made for outcrop checks in the Blanco River gorge¹. Tentative date was set for December 1 for the Halifax Ranch trip. The former GLO tract will be visited later.
4. A strategy was arrived at for transferring air photo mapping to a topographic base map without having to use GIS. This strategy involves primarily using Google Maps and will be developed in more detail later.
5. The strategy also includes provision for including subsurface information from BSEACD files.
6. The Austin West quad and Rapid City East and West quads were discussed as “target” examples for the Mountain City quad geologic map, but with an accompanying report.
7. A Dropbox folder was established for significant data files related to the Mountain City quad mapping project.

Please let me know if I missed or misconstrued anything.

¹ This part of the Mountain City mapping will likely rely heavily on previous work by BSEACD and others, as the geology has been well characterized in the past.
