# MEMORANDUM

To: Brian Hunt  
From: Tom Grimshaw  
Subject: Notes for Status Meeting on Mountain City Quadrangle Project

Thank you for a good meeting yesterday on our mapping update project for the Mountain City Quadrangle. Shown below is a summary of the topics and plans that we covered.

- A set of several recent memos I prepared to continue (and conclude) the project was reviewed.
- A spliced version of the map from the 2.5-minute segments will be prepared at BSEACD after printing the Tier 1, 2, 3, 4, and 5 map files in our Dropbox folder. (I requested that this take place on a revised version to be provided soon.)
- I requested an electronic (and paper, if convenient) copy of the BSEACD well and outcrop location map covering the quad and extending into the adjacent quads. The request was for a topo base map but without photo (Google Earth?) background if possible.
- Plans were discussed for getting the geologic map digitized. It was decided that the geology transferred from the air photo stereo pairs will be used for the digitizing (rather than the photos themselves).
- It was decided to stop trying to get access to the Anthem Tract, at least for now.
- I borrowed the BSCEACD stereoscope, which I will return when the mapping is completed.

Please let me know if I have left anything out.
